

# SpaceX Mars Mission Newsletter

## Introduction

SpaceX is making significant strides towards establishing a human presence on Mars. Below are the future goals along with estimated timelines for the Mars mission.

## Future Goals with Timelines

### 1. Uncrewed Starship Missions

2. **Timeline:** First missions to be launched by **2026**.

3. SpaceX plans to send five uncrewed Starships to Mars, taking advantage of the next Earth-Mars transfer window.

### 4. Establishing a Self-Sufficient City

5. **Goal:** To create a self-sustaining city on Mars, requiring upwards of **one million people** and millions of tonnes of cargo.

6. SpaceX aims to develop transportation capabilities to maximize transfer between Earth and Mars, launching more than **10 times a day** during opportunities that arise every **26 months**.

### 7. Mars Colonization Program

8. **Focus:** Initiated by Elon Musk, the program—also known as **Occupy Mars**—aims to eventually send humans to live on Mars.

9. Musk has advocated for this objective since **2001**, with public statements indicating a personal goal of exploring and settling on Mars dating back to **2007**.

## Conclusion

By utilizing its Starship spacecraft, which represents a fully reusable transportation system, SpaceX aims to carry both crew and cargo to Mars efficiently. The mission is ambitious but opens new frontiers for humanity.
